

2 Presents:

Changing Instruction: A More Accessible and Effective Way forward in Multiplication and Division Gr. 3 & 4

Alex Lawson and Kate Cooper

Many students struggle with the shift from addition and subtraction to multiplication and division. They may not learn their facts, but instead continue to quietly count into their Junior years. They may learn their facts, but not know how to use them to solve problems - whether in their everyday life or those posed in the classroom. We will look at and experience new instruction that does not begin with our typical 'groups of' introduction. We think this instruction builds on children's natural thinking to move toward increasing multiplicative reasoning and proficiency.
